PROJECTS

Intelli Wealth – Solo end-to-end engineering project

July 2025 – Present

[GitHub](#)

[Live Demo](#)

Java 21

Spring Boot 3

Spring Security 6

JWT

PostgreSQL

MongoDB

Redis

Gemini API

React

Docker

- Architected a **modular monolith** with full vertical slices per domain — **Treasury** (budgets, transactions, goals, subscriptions), **Wealth** (assets, liabilities, net worth), **Protection** (insurance, emergency fund, contingency) — each following a strict **API → Application → Domain → Persistence** layered pattern.
- Designed and implemented **45+ RESTful endpoints** with clear resource boundaries, consistent response contracts, Swagger/OpenAPI docs, and input validation.
- Integrated **Redis** caching on high-frequency aggregation endpoints, reducing API response times from **400–500 ms to 20–25 ms** — a **20×** performance improvement.
- Built a **Contingency Analysis engine** aggregating user data to compute monthly burn rate, liquid asset coverage, financial runway, and recommended savings gap via a dedicated analytical endpoint.
- Implemented **polyglot persistence**: **PostgreSQL** for ACID-critical transactional and user data; **MongoDB** for flexible financial summaries, asset records, and AI response storage.
- Engineered stateless **JWT authentication** with Spring Security 6, RBAC, BCrypt password hashing, token refresh flow, and a custom security filter chain.
- Integrated **Google Gemini API** for AI-powered spending analysis, debt strategy recommendations, and personalised financial summaries; optimised response payloads with **Jackson null-field filtering**.

Zairo – Role-based financial workspace API

2025

[GitHub](#)

Java 21

Spring Boot 3

Spring Security

JWT

PostgreSQL

Neon

Swagger

- Built a **role-based financial workspace REST API** with 4 granular roles — Viewer, Analyst, Admin, Organizer — enforcing fine-grained access control over read, write, and export operations.
- Designed **15+ endpoints** covering paginated transaction management, date/category/amount filtering, income-vs-expense net position aggregation, and **PDF report export**.
- Implemented **stateless JWT authentication** with Spring Security; schema auto-provisioned via Hibernate against a serverless **Neon PostgreSQL** database.
- Documented all endpoints via **Swagger / OpenAPI 3**, enabling token-authenticated interactive testing directly from the browser.

SUMMARY

Backend developer proficient in **Java 21**, **Spring Boot 3**, and **Spring Security 6**. Built a modular monolith financial platform with **45+ REST APIs**, **JWT authentication**, **Redis caching** (20× latency reduction: 400–500 ms → 20–25 ms), and polyglot persistence using **PostgreSQL** and **MongoDB**. Experienced in integrating **Google Gemini API** for AI-driven financial insights and building role-based access systems at scale.

Tools: [Postman](#) [Swagger/OpenAPI](#) [IntelliJ IDEA](#)

LEADERSHIP & ACHIEVEMENTS

Team Leader – Smart India Hackathon (SIH) 2025

College-Level Internal Hackathon, Terna Engineering College

- Led a **6-member cross-functional team** through the SIH 2025 college-level internal round.
- Ranked in the **top 45 out of 140+ teams** by pitching an AI-powered EdTech platform solution.

CERTIFICATIONS

- OCI Generative AI Professional**
- OCI AI Vector Search Professional**
Oracle Cloud Infrastructure

EDUCATION

B.E. in Electronics and Telecommunication
